DETAILED ACTION

Claims 15-28 are pending in this application.

Election/Restrictions

Due to the variables in the claims, R1, R2, R3, R4, R5, and R6, etc. . .and their widely divergent meanings, a precise listing of inventive groups can not be made. The following groups are exemplary:

Group I claims 15-18, drawn to compounds of formula (I) wherein R1 is as defined, and R5 and R6 together with the N atom form a pyrrole ring; R2 is NR5R6 and R5 and R6 together with the N atom form a pyrrole ring; R3, R4 are independently of one another H or alkyl, aryl or cycloalkyl radicals; classified in class 548 and subclass 560+.

Group II claim 19 drawn to a process for preparing symmetrical compounds of formula (I) wherein R1 is as defined, and R5 and R6 together with the N atom form a triazole; R2 is a radical of the formula NR5R6 and R5 and R6 together with the N atom form a triazole ring; R3, R4 are the same and are either H or alkyl, aryl or cycloalkyl radicals; classified in class 548 and subclass 255+.

Group III claim 20 drawn to a process for preparing unsymmetrical compounds of formula (I) R1 is as defined, and R5 and R6 together with the N atom form a pyrrole ring; R2 is NR5R6 and R5 and R6 together with the N atom form a 6-membered ring containing one N atom; R3, R4 are independently of one another H or alkyl, aryl or cycloalkyl radicals; classified in class 548 and subclass 560+.

Group IV claims 21,22, and 23 drawn to a compound of formula (VI) and a process of preparing the same, wherein R1 is as defined, and R5 and R6 together with the N atom form a pyrrole ring; R2 is NR5R6 and R5 and R6 together with the N atom form a pyrrole ring; R3, R4 are independently of one another H or alkyl, aryl or cycloalkyl radicals; M is a transition metal of group 8, 9, or 10 of the Periodic Table of the Elements; X is a halide or a C1-C6-alkyl radical; n is the valence of the metal M; classified in class 548 and subclass 402+.

Group V claims 24-28 drawn to a process for preparing polyolefins in the presence of a compound of the formula (VI) wherein R1 is as defined, and R5 and R6 together with the N atom form a pyrrole ring; R2 is NR5R6 and R5 and R6 together with the N atom form a pyrrole ring; R3, R4 are independently of one another H or alkyl, aryl or cycloalkyl radicals; M is a transition metal of group 8, 9, or 10 of the Periodic Table of the Elements; X is a halide or a C1-C6-alkyl radical; n is the valence of the metal M; classified in class 548 and subclass 402+.

If Applicant elects claims 15-18, Applicant should also elect either claim 19 or 20 to be rejoined.

In accordance with 37 CFR 1.499, Applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted. Again, this list is not exhaustive. It would be impossible to produce a complete list under the time constraints due to the sheer volume of subject matter instantly claimed. Therefore, Applicant may choose to elect a single invention by identifying another specific

embodiment not listed in the exemplary groups of the invention and examiner will endeavor to group the same.

The claims herein lack unity of invention under PCT Rule 13.1 and 13.2 since the compounds defined in the claims lack a significant structural element qualifying as the special technical feature that defines a contribution over the prior art. The compounds claimed contain variables R1, R2, R3, R4, R5, and R6, etc. . . which does not define a contribution over the prior art. R1, R2, R3, R4, R5, and R6, etc. . . vary and when taken as a whole result in vastly different compounds. Accordingly, unity of invention is considered to be lacking a restriction of the invention in accordance with the rules of unity of invention is considered to be proper. Additionally, the vastness of the claimed subject matter and the complications in understanding the claimed subject matter imposes a burden on any examination of the claimed subject matter.
